

European Solar Energy Storage

Algeria grid intelligence

Overview

What is Algeria's Energy Transition Plan?

Algeria's energy transition plan consists of three structural components - a new government ministry, a regulatory reform, and a new national renewable energy company. • Ministry of Energy Transition and Renewable Energies (METRE): In June 2020, the government created METRE, the first of two new bodies to manage and carry out the transition plan.

Can Algeria become a key energy supplier for Europe?

With the right strategies in place, Algeria can secure its role as a pivotal energy supplier for Europe and a leader in the global energy transition.

How much solar energy does Algeria generate?

Instead, today Algeria generates only 411 megawatts from renewable energy sources. Nonetheless, officials hope that the new strategy described will reinvigorate attempts to bring more than 1 gigawatt of solar energy online by year-end and an additional 13 gigawatts by 2030.

Why is Algeria's energy consumption so high?

Benefit from up to 2 000 up-to-date data series for 186 countries in Global Energy & CO 2 data Compared to other developing countries with a similar development level, Algeria's consumption is high (1.3 toe per capita), partly because of consumption and losses in the energy sector (oil & gas production and LNG plants, mainly).

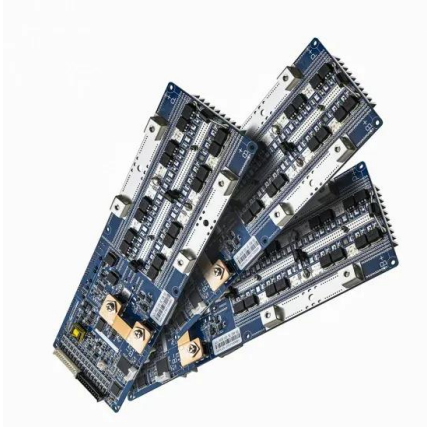

Is Algeria ready for low-carbon energy?

The recent MOU signed between Sonatrach, Sonelgaz and a consortium of European partners, including VNG, Snam, Seacorridor and Verbund Green Hydrogen, underlines Algeria's commitment to tapping into the global demand for low-carbon energy.

How can Algeria improve regulatory efficiency?

Finally, improving regulatory efficiency by streamlining approval processes and reducing bureaucratic delays will foster a more favorable environment for investors, accelerating project timelines and enhancing Algeria's competitiveness in the global energy market. Algeria's future is bright, but the road ahead is complex.

Algerian Energy Policy: Perspectives, Barriers, and Missed

Algeria recently reiterated its commitment to reduce its GHG emissions by 7% by 2020-2030 under the Paris Climate Agreement adopted in 2015, which aims to maintain the rise in temperature average of the Earth below 2 °C. This GHG reduction could reach 22% if Algeria receives the necessary international support, by 2030.
