

European Solar Energy Storage

Angola bluesky energy

Overview

What is Azule's potential in Angola?

Azule's potential in Angola is a source of great pride and responsibility for us and we are committed to developing the opportunities in a responsible and sustainable manner. Our growing focus on natural gas and renewable energy will help to ensure that we remain at the forefront of the energy industry for years to come.

How does the NGC work in Angola?

Historically, gas has been captured as a by-product of oil extraction (associated gas). The NGC is different in that it specifically targets to develop and produce non-associated gas located in the offshore gas fields to supply Angola LNG, thereby enhancing the nation's gas export capability.

Who are BP & Eni & Azule energy?

BP and Eni have announced that Azule Energy, the new 50:50 independent joint venture combining the two companies' Angolan businesses, has been officially established.

Who owns ENI energy & Sonangol?

The company holds stakes in 16 licences (of which six are exploration blocks) and a participation in the Angola LNG joint venture. Azule Energy will also take over Eni's share in Solenova, a solar company jointly held with Sonangol, and the collaboration in the Luanda refinery.
