Retrospective Total cost of ownership analysis of battery electric

Norway is the world leader in Battery Electric Vehicle (BEV) adoption with a 2020 market BEVs are in 2021 still more expensive to produce than ICEVs in spite of battery costs falling from over 1000 USD/kWh in 2010 to 100-150 USD with lengths of 70-200 km in Flügel et al. (2020), taking into account the number of persons in

Electromobility: Norway relies on snow plow with giant battery

The snow plow, which is to be used on the E6 freeway, has a 1,000 kWh battery. This ensures a considerable range, which puts many an electric car in the shade. As the snow plough needs just under 182 kWh for a distance of 100 km during its first use, a range of 500 km should be possible under the conditions of the maiden voyage.
