Beyond the Event horizon: Battery waste, recycling, and sustainability

The accelerated introduction of new electric vehicles (EVs) by automakers is an observable trend that has been welcomed due to improved environmental performance [1, 2] comprising zero emissions in use and lower net carbon emissions per kilometre [3]. However, this research is solely concerned with plug-in Battery Electric Vehicles (BEVs) in the UK, ...

Switched Vertical PDU Power Strip

Switched PDU can locally monitor load level and avoid potential overloads with a LCD hot swapping display, as well as remotely control individual outlets for the rebooting of locked equipment to avoid costly service calls, custom power-on/power-off sequences and load-shedding of non-essential loads during blackouts to extend battery backup runtime for critical equipment.

United Kingdom

The United Kingdom has an ambitious plan to achieve its net-zero goals and was the first G7 country to set in law a carbon neutral target by 2050. The UK mandated that it will end the sale of new gas and diesel cars and vans by 2035. Meeting these targets is a profound transition for the sector, especially in a post-Brexit, post-pandemic economy.
