# Benin elsa energy

## Overview

---

Who is Elsa Energy Sdn Bhd?

ELSA ENERGY SDN BHD [200501001718 (678764-M)] is an integrated energy services & digital solution company, with proven track records and strong client-partner network in the region.

Why is Benin reliant on electricity imports?

Benin is reliant on electricity imports for a significant share of its energy supply. Reform programmes, including plans for electrification, have been put in place in the country, where only 30% of the population had access to electricity in 2017.

What is the energy mix in Benin?

Energy in Benin has a diverse energy mix and takes several forms including: solar, wind, hydropower, biomass, fossil resources, and mineral resources. Out of this energy mix, about 60% of energy comes from biomass. Benin is also dependent on energy imports from Ghana and Côte d'Ivoire.

Does Benin have energy resources?

While Benin has many energy resources, it lacks the infrastructure both to convert these resources into electricity and to transport the electricity throughout the country. Energy resources in Benin and most Western African countries are not evenly distributed.

What can Benin do with waste?

Furthermore, Benin is a cotton exporter belonging to the Economic Community of West African States (ECOWAS), and cotton production waste could be used to produce gas and electricity, helping Benin move towards energy self-sufficiency. Likewise, household waste can be converted into energy, and is an ideal raw material for biogas production.

How much electricity does Benin need?

Benin belongs to several institutions like West Africa (WA), the African Union (AU), the World Trade Organization (WTO), ECOWAS, and WAEMU, and has a total installed energy capacity at 349 MW, with estimated electricity needs at 600 MW, given rapidly growing electricity demand, according to the West African Development Bank (BOAD, 2019) .
