Bess space Albania

Overview

What is Bess & how does it work?

BESS enables the storage of excess variable energy generation, enhancing the grid's capacity and reliability. BESS are able to store excess energy produced in periods of low demand, which can be discharged into the grid during periods of high demand. BESS operators can therefore receive financial returns for meeting surging energy needs.

What is the Bess consortium?

The BESS Consortium is a multi-stakeholder partnership set up to ensure these BESS benefits transform energy systems across low- and middle-income countries (LMICs). The Consortium is on track to meet its target of securing 5 GW of BESS commitments by the end of 2024 and deploying these by the end of 2027.

Where is ADB implementing Bess projects?
