Could pumped hydro be the missing piece in Brazil's energy system?

Conclusion Although energy storage solutions have yet to be widely deployed in Brazil, generation flexibility remains a scarce commodity. Therefore, storage projects, including pumped hydro, could be the missing piece needed to enhance the country's energy system.

Can foreigners invest in battery storage businesses in Brazil?

Investment, incentives and taxation scenarios According to Brazilian law, there are no legal restrictions on direct foreign investment in the battery storage businesses or in the power sector (except in very specific segments or sectors of the economy).

Can Brazil be a big battery storage country?

With well-designed policies and regulations, Brazil has significant potential to follow in the footsteps of jurisdictions like California and Chile for large-scale battery storage, Germany for distributed and large-scale storage, and Australia for both pumped hydro and large-scale battery systems.

How can advanced battery technology be used in Brazil?

Innovative approaches can connect individual areas such as electricity, heating, cooling and mobility. In order to make use of the advanced battery technology, the legal, technical, educational and economic framework conditions in Brazil require analysis and, in part, improvement.

What are the framework conditions for using energy storage technologies?

The framework conditions have been established for the comprehensive use of energy storage technologies in important market segments. Together with institutional partners, the project analyses how the technical, regulatory and economic framework conditions for using electricity storage technologies can be established.

What is the energy matrix in Brazil?

Historically, the Brazilian electricity matrix has been based on hydropower. However, over the last two decades, the mix of installed capacity has changed significantly through the introduction of different energy sources.
