

## European Solar Energy Storage

# Cec solar energy storage

## Overview

---

The California Energy Commission last week approved \$26.7 million in funding for three long-duration energy storage projects that will be built by Redflow, RedoxBlox and Noon Energy to serve disadvantaged, low-income and tribal communities. Why did the CEC get funding for a long-duration energy storage project?

The funding grew out of a solicitation for demonstration and deployment projects that could speed up commercialization of long-duration energy storage technologies while improving grid reliability and resilience for disadvantaged and low-income communities and California Native American tribes, according to the CEC.

Where can I find a list of solar equipment?

To view listed equipment or download a copy of the active PV Module, Inverter, Energy Storage System (ESS), Battery, Meter, or Power Control System (PCS) lists please visit the Energy Commission's Solar Equipment Lists application.

How long does a CEC environmental review take?

The CEC then has 270 days to complete the environmental review. This program was developed with a goal of achieving California's mandate that all retail electric sales come from renewable energy and zero-carbon resources by 2045.

Which energy storage systems are on the energy storage system list?

Some energy storage systems on the Energy Storage System List may include an inverter that is capable of advanced functionality, also known as a "smart inverter". Note that energy storage systems on the Energy Storage System List are capable of different levels of advanced functionality.
