### Central Battery System ZB-S

Central monitoring and control of self-contained luminaires including automatic function- and duration test. All well-proven advantages of the STAR and CG Technology, now available for ...

### Central Battery Systems in the UAE

The CPS 220/48.1 series from INOTEC covers various load requirements and housing sizes. In-built with the Joker-Technology, individual lamp- and circuit monitoring are standard in this system. It is a maintenance-free central battery system, which includes automatic function monitoring and individual luminaire monitoring without additional data

## Emergency lighting , Backup lighting

The first approach is to use a centralized battery system in which the lighting fittings are connected to a central battery. The second approach features a decentralized system that uses fittings containing a battery. However, historically the use of a fitting with a self-contained battery is preferred for Ex offshore installations.

## Central battery systems

Both types of central system operate on the same principle. The luminaire is fed, via emergency sub-distribution, from the central system. Static Inverter Systems (AC/AC) Static inverter systems operate in a similar manner to AC/DC Central Power Supply Systems, with the exception that the system constantly gives a 230V AC output.

## **ZB-S**

Eaton's ZB-S is an emergency lighting central battery system that provides reliable power supply (230V AC/220V DC) to safety and exit luminaires. Automatically testing itself, the ZB-S ...

## CBS Central Battery Systems

The EMO4 module is used to transmit signals from the central battery system to other BMS or PPOZ devices. The device has four relay outputs with the possibility of NO or NC connection. The following functions can be programmed for the control outputs: mains operation, battery operation, fault or one of the other available functions.

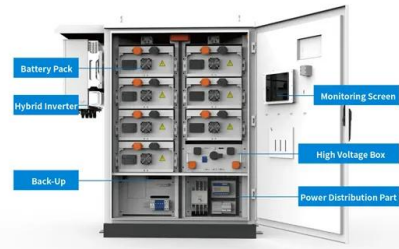

## Battery System ZB-S

These subassemblies allow the connection of the central battery system to a central control station (ZLT) or building management system (BMS). The most important system states are transmitted via potential-free signalling contacts. There are two input channels for the remote monitoring of the central battery system.
