Overview

What happened to electricity in Cuba?

Cuba's government on Saturday said that some electricity was restored on the island after one of the country's major power plants failed and left millions without electricity in an outage that started two days earlier. Energy minister Vicente de la O Levy said the country had 500 megawatts of energy in its electrical grid early Saturday.

Is the energy crisis a new problem in Cuba?

Cuba's energy crisis is not a new problem. The island's limited infrastructure has not received the maintenance it requires for years and recurring blackouts date back to the 1990s.

What are Cuba's emergency measures to slash electricity demand?

The Cuban government has announced emergency measures to slash electricity demand, including suspending classes, shutting down some state-owned workplaces and canceling nonessential services. Officials said that 1.64 gigawatts went offline during peak hours, about half the total demand at the time.

Why does Cuba have a power grid crisis?

While the collapse of the electrical grid comes as a surprise, the crisis is years in the making. Cuba's power plants are dilapidated and in desperate need of maintenance. In addition, Cuba produces very little fuel of its own, meaning it relies on imports to keep the electrical grid afloat.

What caused the power crisis in Cuba?

The crisis began on Friday when one of the country's largest power plants, the Antonio Guiteras power plant in the western province of Matanzas, failed shortly before midday on Friday. The failure prompted a total breakdown of Cuba's electrical system.

Why did Cuba have a power outage?

It was not just another power outage; it represents a systemic failure in a country with aging infrastructure that does not produce enough energy to be self-sufficient. Cuba relies on imports it cannot afford and on trading partners that are supplying increasingly diminishing amounts of oil.
