Overview

How many PV modules are in a solar container?

The innovative and mobile solar container contains 196 PV modules with a maximum nominal power rating of 130kWp, and can be extended with suitable energy storage systems. The lightweight, ecologically-friendly aluminium rail system guarantees a mobile solution with rapid availability. at full power.

Why should you choose a mobile PV system?

A mobile PV system permits a quick reaction to requirements as they change, and allows you to top-up during spikes in demand. Major construction sites require large volumes of electricity. Solarfold can produce clean and environmentally-sustainable electricity, particularly when immense volumes of energy are needed in inaccessible areas.

What is a solarfold photovoltaic container?

at full power. The solarfold Photovoltaic Container is mobile for universal deployment with a light and versatile substructure. The semi-automatic electric drive unit manoeuvres the mobile photovoltaic system into its operating position rapidly and smoothly along a length of around 123 metres.

Why should you choose solar panels on shipping container?

It is based on a 10 - 40 foot shipping container. Efficient hydraulics help get the solar panels ready quickly. Due to its construction, our solar panels on shipping container offers unmatched flexibility and maneuverability. Sensitive solar arrays can be effectively protected from storms, vandalism and all possible threats.

Why should you choose a modular energy storage container?

Advanced monitoring systems and IoT integration ensure optimal performance and remote management capabilities. The modular design allows for easy

expansion, with the option to expand the battery storage system by 100 - 500kwh, making our energy storage container perfect for meeting growing energy demands.
