

European Solar Energy Storage

Does duke energy offer solar tariffs

Overview

Will Duke Energy pay for residential solar panels?

CHARLOTTE — Starting Oct. 1, North Carolina is changing the way owners of residential solar panels get paid for the energy they produce, and, specifically, how much Duke Energy will pay for it. Since 2000, Duke customers with residential solar panels have been able to take advantage of something called net metering.

Does Duke Energy offer solar rebates in North Carolina?

Duke Energy offers rebates to North Carolina customers who want to install a solar panel system. For homeowners, the program offers a \$0.60/Watt rebate for systems up to 10 kilowatts. The benefit is equivalent to \$3,600 for a 6 kilowatt (kW) system. Nonresidential customers also have access to rebates of \$0.50/Watt to \$0.75/Watt.

What if Duke bought solar energy from other power producers?

If Duke was buying from other power producers, the utility would be paying far less for that energy but because of the net metering rules, they had to purchase the solar energy at the higher, guaranteed rate. According to spokesman Randy Wheelless, that extra cost was getting passed on to Duke's non-solar customers.

Does Duke offer a time-of-use solar system?

Instead of a flat rate, Duke customers with solar will shift to a time-of-usage system, which compensates them for excess energy the panels produce based on the cost of energy at the time it's produced. The timing for customers shifting to that system depends on when they installed their solar.

Will Duke Energy change its net energy metering policy?

In March 2023, Duke Energy announced major changes to its Net Energy Metering (NEM) policy. These policies will affect both current and future solar

clients. Duke Energy is making these changes based on an internally conducted study that concludes folks with solar PV on their homes are unfairly subsidized by non-solar customers.

Is Duke Energy overpaying solar owners?

Like utility companies across the country, Duke Energy argued the company was overpaying solar owners for their power. Duke did a study on their net metering costs and found residential solar was producing the most energy at times like midday when energy usage is low.

Does duke energy offer solar tariffs

[South Carolina Solar Programs](#)

Learn about Duke Energy's solar rebate program in South Carolina, one of many new programs being introduced to support customers interest in renewable energy.
