## Overview

---

MidAmerican Energy continues to explore ways to diversify energy production while keeping prices affordable for our customers, including small- and utility-scaled solar projects.

MidAmerican Energy continues to explore ways to diversify energy production while keeping prices affordable for our customers, including small- and utility-scaled solar projects.

Utility-scale solar energy has become an essential part of our efforts to generate energy with net-zero greenhouse gas emissions for our customers. MidAmerican's current solar projects consist of 141 megawatts of renewable generation capacity, adding to our nearly 7,700 megawatts of wind capacity.

MidAmerican Energy is on a mission to reach net-zero greenhouse gas emissions by 2050 — all while maintaining the reliability our customers require, at a price they can afford and that technological advances support. A major milestone on our road to net zero is delivering 100% renewable energy to.

Powerwall is a compact home battery that stores energy generated by solar or from the grid. You can use this energy to power the devices and appliances in your home day and night, during outages or when you want to go off-grid. With customizable power modes, you can optimize your stored energy for.

Customer generation – or distributed generation – systems are small-scale, on-site power sources located at customers' homes or businesses. Rooftop solar panels are a common example of distributed generation technology. Customers interested in solar or other types of distributed generation are.
