# Does montana use solar energy

## Overview

---

In 2024, solar energy generated about 2% of Montana's in-state generation. 128 Montana's solar power was provided only by customer-sited, small-scale (less than 1 megawatt) residential and business solar panel installations until 2017, when the state's first.

In 2024, solar energy generated about 2% of Montana's in-state generation. 128 Montana's solar power was provided only by customer-sited, small-scale (less than 1 megawatt) residential and business solar panel installations until 2017, when the state's first.

In Montana, you can take advantage of tax exemptions, net metering, tax credits and fixed-rate loans in addition to the federal tax credit. Find out more about Montana solar incentives if you're considering adding solar panels to your home. Montana residents have solar incentives available to help.

Montana ranks 38th in the country for solar installations.\* The average electricity rate is 13.10 cents per kilowatt-hour.\*\* The average solar payback period is 13 years.\*\*\* Homeowners are eligible for the Renewable Energy Systems Exemption and the federal solar investment tax credit (ITC). The.

In 2024, solar energy generated about 2% of Montana's in-state generation. 128 Montana's solar power was provided only by customer-sited, small-scale (less than 1 megawatt) residential and business solar panel installations until 2017, when the state's first utility-scale power facilities began.

Montana has a plethora of solar incentives available, including both state and federal tax credits, rebates, net metering (buy-back) programs, and many more that enable zero-money-down solar! Considering solar panels in Montana?

With more than 250+ sunny days per year and some of the top solar.

There's no way around it: Installing solar panels is expensive. On the bright side, Montana residents can take advantage of the federal solar tax credit and state incentives that encourage clean energy adoption. Here's everything you

need to know about how to make installing panels more affordable.

The most significant incentive in The Treasure State is the federal solar tax credit, also called the solar investment tax credit (ITC), which doesn't end until 2035 thanks to an extension from the Inflation Reduction Act in 2022. Quick Facts Value: 30% of solar installation costs Frequency: . Should you go solar in Montana?

Paired with available incentives, going solar in Montana can make sense. In some cases, it can take as few as six years to recoup the costs of investing in a solar power system. Montana boasts a bevy of solar installers to make the process easy while the incentives help take the sting out of the sticker shock of a project.

Do solar panels save energy in Montana?

Montana receives about 201 sunny days per year, which is in line with the national average of 205 sunny days. Solar panels are only as efficient when they receive direct sunlight, so homes in Montana that get a lot of sunlight will have a higher potential for energy savings with solar panels.

Is solar energy a good resource in Montana?

Solar energy is an excellent resource in Montana, even with our short winter days. Montana has several sunny winter days, and over the course of a year, Montana's solar resource is 26 percent greater than the national average.

What is the cost of solar in Montana?

The cost of solar in Montana for a typical system is about \$20,286 after the federal tax credit, with residents paying an average of \$3.22 per watt.

Does Montana have a solar tax credit?

Montana does not have a state solar tax credit. However, homeowners can take advantage of the federal solar tax credit, which allows you to deduct 30% of your solar installation costs from your federal income taxes. That's thousands of dollars in savings!.

Is solar a good option for a Montana home?

For Montana homeowners using more than 858 kWh monthly, solar is likely to be worthwhile in terms of energy needs. The average monthly usage in

Montana is above this benchmark.
