

European Solar Energy Storage

Dukosi Ltd Syria

Overview

What makes dukosi unique?

Dukosi's unique chip-on-cell technology and proprietary C-SynQ[®] communication protocol transform the way batteries are designed and monitored. The DKCMS on-cell monitoring and nonvolatile embedded memory also provide lifetime traceability, enabling customers' products to be compliance-ready for upcoming regulations like the EU Battery Passport.

Who bought dukosi?

Dukosi was acquired in the autumn of 2019 by KCK Partners, an investment group. KCK take a long-term view to build companies with differentiated solutions. With their investment Dukosi will continue to build its activities at its base in Edinburgh and subsequently through global expansion.

What's new at dukosi?

"It is an extremely exciting time for Dukosi as we release the first DKCMS chips into production, putting real intelligence on every cell," said Mark Pinto, CEO of Dukosi. "We've been investing in all our global locations, growing our talent and presence to better serve our expanding market opportunities worldwide."

Cell Manufacturing

Maximize supply chain trust and security. By using Dukosi Cell Monitoring Solution (DKCMS(TM)) during cell manufacture, the data stored within the Cell Monitor IC ensures both are 'tied together', i.e. recording each cell serial number in its secure data store, which provides a layer of trust as the stored information must reflect the cell it's attached to.
