

European Solar Energy Storage

Dynamic energy Cyprus

Overview

Is wind energy a good investment in Cyprus?

As far as wind energy is concerned, it has the potential to play an important role in the future energy supply in Cyprus (Table 5). Within the last 15 years, wind turbine technology has reached a very reliable and sophisticated level.

Can a long-term energy planning model be used in Cyprus?

In order to examine options for economically optimal deployment of renewable energy in Cyprus under different scenarios, and to understand the potential impact of key policy decisions on the power generation mix, a long-term energy planning model of the current power system in Cyprus was developed.

How will Cyprus achieve a higher share of renewables?

Cyprus has set out to attain a higher share of renewables, and this roadmap helps to assess optimal investment strategies in the power sector. Solar PV and wind power will play a major role in the roadmap to 2030. Roadmap findings will play an important role to revise existing energy policies and develop new ones.

Does Cyprus have a natural energy source?

A remarkable 62% of the country's export earnings is used to pay for the country's oil import. Cyprus has no natural oil resources and relies entirely on imported fuel for its energy demands. At the present, the only natural energy resource available is solar energy. Fig. 1. Cyprus primary energy sources.

How does Cyprus produce electricity?

Cyprus is an island state whose energy production is almost completely dependent on imported hydrocarbon fuels. Its electricity production sector is more than 90% dependent on oil products while the remaining 9% are covered by imports of coal (4.5%) and by solar energy (4.5%).

Can wind energy compete with other forms of energy in Cyprus?

A recent research carried out in Mari village (near Vasilikos Power Station) and Cape Greko (South Eastern Cape of Cyprus) by a Wind-Solar Energy Corporation, confirm that the exploitation of wind energy in Cyprus' southern coastal zone is able to compete with other forms of energy, and become economically viable.
