# Ecuador backup for power outage

*LiFePO<sub>4</sub> Battery, safety*

*Wide temperature: -20~55°C*

*Modular design, easy to expand*

*The heating function is optional*

*Intelligent BMS*

*Cycle Life: ≥ 6000*

*Warranty: 10 years*

## Overview

---

The 2023-2024 Ecuador electricity crisis was caused by a severe drought that depleted water levels at hydroelectric plants and a lack of capacity buildup. Ecuador experienced rolling blackouts for up to 14 hours per day in the fall crisis (started on 23 September 2024 ) of 2024. Researches describe fall 2023 (27 October–18 December 2023) and spring 2024 (16–30 April 2024). The 2023-2024 Ecuador electricity crisis was caused by a severe drought that depleted water levels at hydroelectric plants and a lack of capacity buildup. Ecuador experienced rolling blackouts for up to 14 hours per day in the fall crisis (started on 23 September 2024 ) of 2024. Researches describe fall 2023 (27 October–18 December 2023) and spring 2024 (16–30 April 2024) crises as separate events. The President of Ecuador Daniel Noboa had announced on 10 December, 2024 that the outages will end on December 20.

No new electric capacity had been added to the since station started operation in 2016, while the demand by 2024 had increased by 24%, or about 400 (MW). The were neglected with just 880MW operational out of 2 (GW) . The low-cost electricity (at 10. No new electric capacity had been added to the since station started operation in 2016, while the demand by 2024 had increased by 24%, or about 400 (MW). The were neglected with just 880MW operational out of 2 (GW) . The low-cost electricity (at 10 US cents per , with discounts for the industry) limited the private investment. The might have further exacerbated the drought. The drought is considered to be the worst in 60 years, especially in the south of the country. When the power operator of Ecuador warned about the severe drought in January 2024, no actions were taken until April, when blackouts of up to 8 hours a day were implemented. The (summer) dry season in 2024 arrived two months earlier than usual in Ecuador. According to Miguel Calahorrano, an ex-minister of electricity and renewable energy, 400 MW of new capacity are needed annually to meet the demand, existing thermal plants need to fixed (in the fall only Trinitaria (125 MW), Machala Gas (125 MW), G. Zevallos (146 MW) and Jaramijó (140 MW) were operating at high power until October 15, 2024), and thermal power should be used to delay the day the reservoirs are tapped for generation. As quick fixes, he suggested improving relationship with Colombia, so that Ecuador can import electricity from there (and from Venezuela through Colombia).

On 24 September 2024, three power stations known as Paute Integral ( , , and Sopladora) ceased operations since the water levels were approaching critical marks. Power cuts up to 12 hours a day were implemented.

Due to extensive use of diesel generators burning high-sulphur fuel, the air quality in significantly deteriorated. At the peak of the spring 2024 crisis (with 8 hour blackouts per day), • quantities almost doubled;• levels went up almost 40%;Due to extensive use of diesel generators burning high-sulphur fuel, the air quality in significantly deteriorated. At the peak of the spring 2024 crisis (with 8 hour blackouts per day), • quantities almost doubled;• levels went up almost 40%;• content had risen by 180%, above the (WHO) norms;• () increased by 20% (this had been added by more traffic pollution due to inoperable traffic lights).Three ministers of energy and non-renewable natural resources [] were fired during the crisis, with accused of sabotage. By late fall of 2024, the economic losses were estimated at 2 billion US dollars.

Does Ecuador have a power crisis?

As of Wednesday night, energy had been restored in 95% of the country, according to the government. Ecuador has been struggling with an energy crisis for years. The latest saw Ecuadorean President Daniel Noboa declare an energy emergency in April and order eight-hour nationwide power cuts amid a drought that affected power generation.

When will the power outages end in Ecuador?

The President of Ecuador Daniel Noboa had announced on 10 December, 2024 that the outages will end on December 20. No new electric capacity had been added to the Ecuador power grid since Coca Codo Sinclair station started operation in 2016, while the demand by 2024 had increased by 24%, or about 400 megawatt (MW).

Did Ecuador experience a blackout in 2024?

Ecuador experienced rolling blackouts for up to 14 hours per day in the fall crisis (started on 23 September 2024 ) of 2024. Researches describe fall 2023 (27 October–18 December 2023) and spring 2024 (16–30 April 2024) crises as separate events.

Why did Ecuador declare a power emergency in April?

The latest saw Ecuadorean President Daniel Noboa declare an energy emergency in April and order eight-hour nationwide power cuts amid a drought that affected power generation. In the capital city of Quito, a CNN team saw two hospitals, including a children’s medical center, lose power during the blackout.

What happened to Ecuador's electricity?

Ecuador’s Minister of Energy Roberto Luque said in a message posted on X, formerly Twitter, that the failure was reported by the country’s National Electricity Operator and caused “a cascade disconnection,” leaving the nation without energy service.

Will Ecuador stop rationing electricity before the holidays?

(AP Photo/Dolores Ochoa, File) QUITO, Ecuador (AP) — Ecuador’s government will stop rationing electricity services just before the holidays, President Daniel Noboa — who was heavily criticized for the cuts resulting in three months of daily interruptions — announced Tuesday. Normal service will resume on Dec. 20.
