Energy storage battery graphite price trend chart

Overview

Is graphite used in battery industry?

, and graphite for AAM used in the battery industry. In the steel market, synthetic graphite demand for electrodes has been on an upward trend over the past several years, driven by the rising share of EAF steelmaking, particularly super-size electrodes which command a higher price v.

Will graphite overtake steel in the battery market in 2025?

g around 1.3 million tonnes (mt), 20% higher y-o-y. The faster pace of growth in the battery market compared to steel means that it is expected that by late 2025, graphite demand from the battery sector will comfortably overtake demand from the steel sector, reinforcing graphite's strategic importa.

Why are graphite prices unstable?

As per the graphite price chart, due to erratic demand and supply chain challenges, graphite prices in the United States were unstable. Automakers responded to market uncertainty by adjusting their output, which resulted in unequal development for the electric vehicle sector.

Why were graphite prices volatile in the UK?

During the first quarter of 2025, the graphite prices in the United Kingdom reached 1513 USD/MT in March. The market was volatile due to shifting industrial sector demand and disruptions in the worldwide supply chain. External considerations, such as logistical difficulties and changes in trade policy, tempered early confidence.

Is graphite a good choice for EV & Energy Stor?

hite's incumbent status remaining largely unchanged. And for good reasons, too: graphite provides high thermal and electrical conductivity, reasonable energy density, and strong cycling ability, and is low cost—the latter an important consideration for such a margin-sensiti industry as the global EV

and energy stor.

Will changes to the production process affect graphite price?

Add to this the need to understand if changes to the production process to ease ESG concerns, particularly the synthetic graphite production process, will have a material impact on price. The Fastmarkets graphite long-term forecast leverages our expertise in the graphite market and the associated price data and market intelligence.

Western Battery Graphite Markets: is there hope ahead?

In 2024, global graphite demand reached around 3.7-3.8 million metric tonnes, with most of the demand split across two major industries--graphite for high-purity electrodes used in steel production, and graphite for AAM used in the battery industry.

Graphite long-term forecast

These graphite pricing insights are paired with expert economic modeling and data to provide market participants and investors with unmatched clarity on how the graphite market will evolve in the next 10 years.
