

European Solar Energy Storage

Energy storage battery outdoor camping

Overview

How much power do you need for camping?

The answer to this depends largely on what you intended to do with it. If all you want is backup power for your family's phones while camping over the weekend, you can get away with something relatively small — 200 watt hours would be more than enough.

What types of batteries are used in portable power stations?

The two main classes of batteries you'll see right now in portable power stations are LiFePO4 and NCM. LiFePO4 batteries utilize lithium, iron, and phosphate, and are considered safer and longer lasting than other batteries.

Are LiFePO4 batteries any good?

Generally speaking, units with more watt hours and more features were heavier. With the new LiFePo4 battery chemistry, I personally found that units in the 1000 Wh range were fairly portable, while those that were closer to 1500 Wh were more of a chore to pick up and move around.
