Energy storage transfer station equipment

Overview

What is an Energy Transfer Station?

An Energy Transfer Station (ETS) is a type of infrastructure designed to include the supply, installation, and commissioning of mechanical and electrical equipment and piping.

What is a SEC energy transfer station?

SEC Energy Transfer Stations are an economical alternative to the high cost of "on site" fabrication. Working closely with our clients we match a specific array of standard industry components with our "high performance" heat exchangers to provide the exact energy transfer capacity needed.

What is a transfer station?

A Transfer Station is a fixed facility used for transferring solid waste from collection vehicles to long-haul vehicles. It is not a storage facility such as one where individual residents can dispose of their waste in bulk storage containers. Please see a list and map of transfer stations within our H-GAC region.

Why should you choose a custom-built energy transfer station?

Our custom-built energy transfer stations feature a compact size and weight, and are engineered to easily transport through halls and stairways as needed, with minimum hassle. Available both pre-assembled or split in easy to assemble modules if required due to space and height restrictions. Forget about waiting for on-site fabrication contractors.

What is a Danfoss energy transfer station?

High value engineered components designed to work together from Danfoss include controllers, pressure independent valves and heat exchangers. Our custom-built energy transfer stations feature a compact size and weight, and are engineered to easily transport through halls and stairways as needed, with

minimum hassle.
