

European Solar Energy Storage

Ess installation Nauru

Overview

Can ESS be used in a self-consumption system?

Use ESS in a self-consumption system, a backup system with solar, or a mixture of both. For example, you can use 30% of the battery capacity for self-consumption and keep the remaining 70% available as a backup in the event of a utility grid failure. ESS can be configured to optimise self-consumption or to keep batteries charged.

How does ESS work?

ESS can be configured to optimise self-consumption or to keep batteries charged. When there is more PV power than is required to run loads, the excess PV energy is stored in the battery. That stored energy is then used to power the loads at times when there is a shortage of PV power.

How do I set up an ESS system?

There are a few different ways to set an ESS system up. A combination of these are possible as well: See below drawings to get an idea of all possibilities. The first drawing shows the wiring when a MultiPlus-II is used; and the second one shows how it is wired with a MultiPlus or Quattro. Both drawings show all AC- and DC-Coupled combinations.

Does ESS assistant need battery capacity?

Battery capacity is no longer required by the Assistant. Instead, enable battery monitor and enter the capacity on the General tab in VEConfigure. The PV Inverter Assistant is included in the ESS Assistant: it is no longer necessary to add it separately. (NB. Overload and high-temperature bugs are fixed.) 9. ESS Quick Installation Guide.

How does ESS work if a utility grid fails?

ESS can also be configured to keep the batteries fully charged. A utility grid failure is then the only time battery power is used as a backup. Once the grid

is restored, the batteries will be recharged either from the grid or from solar panels when available.

Which parameters are ignored when the ESS assistant is installed?

They are ignored when the ESS Assistant is installed. PV power coming from a grid-tie inverter, either connected in parallel or on AC-out, will be used to charge the battery. Charge current and other charge parameters are configured on the charger tab in VEConfigure3.
