

## European Solar Energy Storage

# Europower energy New Caledonia

## Overview

---

### What is New Caledonia's energy mix?

New Caledonia's energy mix consists of 97.7% fossil fuels, including 54.1% petroleum products (mainly fuel oil and diesel), 43.6% coal, and 2.3% renewable energies. The metallurgical industry consumes 61.2% of the total energy consumption of the territory.

### What is New Caledonia's energy strategy?

New Caledonia, having embarked on this transition, is adopting an energy strategy in line with the Paris Agreement and the Green Deal focused on decarbonisation, green mobility and energy efficiency. In addition, the Territory will benefit from the Multiannual Indicative Programme (MIP) 2021-2027 for the Pacific OCTs.

### What is New Caledonia's energy policy?

As a country of Oceania, one of the parts of the world most impacted by climate change, New Caledonia wishes to be exemplary in terms of energy policy. Building on the Paris Agreement, the Congress of New Caledonia adopted the Energetic Transition Scheme of New Caledonia (STENC) in June 2016. The scheme has three main objectives for 2030:.

### What is the role of the Caledonian Energy Agency?

The Caledonian Energy Agency's role is to implement the energy transition scheme set out by the government and to contribute to the development of the electrical system. It also promotes the rational use of energy and the development of renewable energies.

### Why is New Caledonia so vulnerable?

The dependence and size of New Caledonia's market compared to larger countries in the Asia-Pacific zone makes the island very vulnerable in terms of energy supply - an unnecessary level of dependence considering the local

renewable resources that could be exploited on the island.

Where is New Caledonia located?

New Caledonia is a French territory made up of a group of islands and archipelagoes of Oceania, located in the Coral Sea and the South Pacific Ocean. It has a wide lagoon often considered "the most beautiful lagoon in the world".
