How to write ceil and floor in latex?

Is there a macro in latex to write $\text{ceil}(x)$ and $\text{floor}(x)$ in short form? The long form $\text{left ceil}\{x\}\text{right}$ is a bit lengthy to type every time it is used.

How to represent the floor function using mathematical notation?

I suspect that this question can be better articulated as: how can we compute the floor of a given number using real number field operations, rather than by exploiting the printed notation, ...

how does a floor function work?

I understand what a floor function does, and got a few explanations here, but none of them had a explanation, which is what i'm after. Can someone explain to me what is going ...

Floor Function Proof

The floor function (also known as the entier function) is defined as having its value the largest integer which does not exceed its

argument. When applied to any positive argument it ...

How do the floor and ceiling functions work on negative numbers?

The correct answer is it depends how you define floor and ceil. You could define as shown here the more common way with always rounding downward or upward on the number line.

'Floor' and 'ceiling' functions

Is there a convenient way to typeset the floor or ceiling of a number, without needing to separately code the left and right parts? For example, is there some way to do $\lceil x \rceil$ instead of \lceil

Rounding to nearest integer symbol in Latex

17 There are some threads here, in which it is explained how to use \lceil \rceil \lfloor \rfloor . But generally, in math, there is a sign that looks like a combination of ceil and floor, which means ...
