Though China does not yet have in place a fully developed financial incentive system for renewable energy, the government has been providing support since the 1950s. The major financial incentives in existence today include subsidies, tax-related incentives, custom duties, and pricing incentives.

China is poised to reduce its subsidies for solar power as the nation experiences a significant surge in renewable energy installations. The country's National Development and Reform Commission (NDRC) has announced a transition towards market-driven pricing mechanisms, a move aimed at fostering.

In a significant policy shift, China's National Development and Reform Commission (NDRC) announced it will scale back subsidies for renewable energy projects after years of rapid expansion. This move comes as China solidifies its position as the world's leading clean energy powerhouse, boasting.

BEIJING, 10 February 2025 - In a move to reshape the global renewable energy landscape, China announced that it will reduce subsidies for wind and solar projects after achieving its clean energy targets six years earlier than expected. This decision, presented by the National Commission for.

China has undergone a major policy change in recent years, shifting its renewable energy pricing from a premium feed-in tariff (FIT) model to a “grid parity” model where renewable and coal plants sell electricity at the same price. The country's National Energy Administration stopped approving FITs.
