The battery can store the extra energy produced from solar panels during the day to avoid using electricity at a more expensive rate. The peak time-of-use (TOU) rates can be double the price compared to off-peak rates. In such a scenario, a solar battery storage system can come in handy for using electricity without having to pay such a high price.

## Best Battery Storage Options for Solar Panels

While lead-acid batteries offer a more affordable option for solar panel systems, they typically have a shorter lifespan and require more maintenance compared to lithium batteries. Lithium batteries, although initially more expensive, provide longer cycle life, higher energy density, and lower maintenance requirements, making them a popular

## How to buy the best solar battery storage

The home has no solar panels or battery. Grid-connected solar (no battery) The most typical set-up for homes with solar panels. The solar panels supply power during the day, and the home generally uses this power first, resorting to grid power for any extra electricity needed on low-sunlight days, at night, and at times of high power usage.

## Should I Get Battery Storage for My Solar Energy System?

A solar-plus-storage system costs about \$25,000-\$35,000, depending on the size of the battery and other factors. It is easier and cheaper to install the panels and battery at the same time. But if you've already installed solar panels and want to add storage, you can: The battery will cost anywhere from \$12,000 to \$22,000.

## How come more residential solar systems don't have battery storage?

I feel like battery storage for home solar systems should be a no-brainer. Charge the batteries when the panels output more power than your home needs, and discharge the batteries when your home needs more power than the panels are outputting. "Roughly 6% of residential solar systems installed in 2020 included battery storage." - cleanegroup
