American Samoa: Unlocking Renewable Energy Potential

The territory possesses substantial solar resources and wind and biomass resource potential. Planned renewable power projects include utility-scale solar photovoltaic (PV) and wind generation with battery storage systems. This factsheet provides a high-level overview of American Samoa's power and transportation sectors - as well as

Solar Systems

Typically, solar panels last 25 to 30 years. While their efficiency generally declines over time, the majority of panels still generate between 80 and 85 percent of their initial power output after 25 years.
