What is hiku7 solar?

In HiKu7, Canadian Solar uses non-destructive scribing and thermal stress to split the cell which prevents cracks and improves the mechanical strength of the cell. The half-cell design of HiKu7 modules reduces the hot spot temperature & the large area of the solar cell makes the hot spot temperature rise more moderately.

What is the efficiency of hiku7 solar panels?

The efficiency of HiKu7 is around 21.7%. If the efficiency of the solar panels is higher, it means less space is required. For Example: If one needs to set up a 5KW solar power plant and the solar developer is going with 415-watt panels then 13 solar modules would be required for this project.

What is a hiku6 solar panel?

HiKu6 is a monocrystalline hybrid solar panel manufactured by Canadian Solar. It's the manufacturer's 6th series of PV module systems, offering a power output of 555 W and efficiencies between 20.7% and 21.6%. Canadian Solar's HiKu6 features state-of-the-art technology and is highly durable and efficient.

How do I get the best prices on Canadian Solar hiku7 modules?

To get the best prices on Canadian Solar HiKu7 modules, give us a call at 011 4353 6666. Share This Story, Choose Your Platform! Canadian Solar HiKu7 is the most efficient MonoPERC solar panel with more than 600w.

Are Hiku solar panels a good choice?

The HiKu Canadian Solar panels are regularly used in rooftop commercial projects as they offer great module efficiency at a cost-effective price. These panels are typically seen at 330W at their most cost effective price point, but the modules in this series can go up to 670W.

What is a Hiku Canadian solar panel?

These panels are up to 665W and up to 2.4m in length, significantly larger in dimensions and output than a typical residential solar panel. The HiKu Canadian Solar panels are regularly used in rooftop commercial projects as they offer great module efficiency at a cost-effective price.
