How do solar panels produce electricity?

Photovoltaic (PV) cells within solar panels absorb sunlight. When sunlight hits the cells, photons from the light energize electrons in the semiconductor material, creating an electric field. This marks the start of electricity production. The energized electrons flow through the PV cells, generating direct current (DC) electricity.

How does solar power work?

Once the solar energy is captured, the direct current (DC) generated by the photovoltaic cells flows into an inverter, which converts it into alternating current (AC). This AC electricity powers our devices and appliances. For any extra electricity not used immediately, there are three main options for homeowners:.

How do solar panels convert sunlight into electricity?

Solar panels convert sunlight into electricity through photovoltaic cells made of silicon semiconductors. The sun beams enough light to match our global energy use for a year and a half in just one hour. This shows how much power is in sunlight. Solar systems turn this light into electricity.

How does a solar thermal system produce electricity?

A solar thermal system generates electricity indirectly by capturing the heat of the sun to produce steam, which runs a turbine that produces electricity. A solar photovoltaic system produces electricity directly from the sun's light through a series of physical and chemical reactions known as the photovoltaic effect.

How do solar photovoltaic cells work?

Solar photovoltaic cells are grouped in panels, and panels can be grouped into arrays of different sizes to power water pumps, power individual homes, or

provide utility-scale electricity generation. Source: National Renewable Energy Laboratory (copyrighted).

What are the steps involved in generating solar electricity?

These are the steps involved in generating solar electricity in the power plant.

1. Solar Energy Capture: When sunlight reaches the photovoltaic cells in a solar panel it excites the electrons within the cells. The movement of electrons causes the flow and creates an electrical current.
