

European Solar Energy Storage

How to make a homemade solar energy generator

Overview

With zero emissions, solar generators are far more environmentally acceptable than those running on fossil fuels. When you are enjoying the great outdoors, the last thing you need is a diesel generator polluting everything around you.

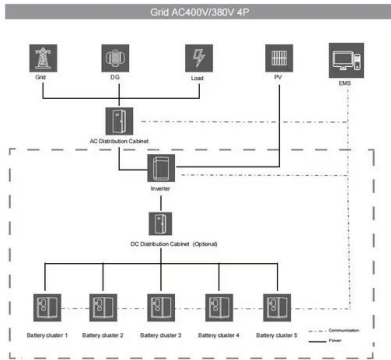

Solar generators are much safer to use indoors and outdoors than those running on fossil fuels that may leak or cause a fire.

Once you invest in components and tools, your spending is done. Their components typically have warranties that go over 20 years.

Not all ready-made generators are powerful like the Kodiak Solar Generator. If you need more energy than an average RV owner, then building your own generators is the way to go.

Unlike fossil fuel generators that use complicated internal combustion engines, solar generators are easy to repair as they are to build.
