# How to sell solar energy

## Overview

---

Can you sell solar energy back to the grid?

This two-way relationship between your property and the electrical grid makes selling solar power possible. Here's how it works: The most common method for selling solar energy back to the grid is through net metering. Simply put, net metering allows your electric meter to "run backward" when you produce more energy than you use.

Is selling solar power profitable?

Selling solar power is not only profitable but also a noble obligation. Once you install roof solar panels, you use less grid energy, which is highly expensive. Using this expensive energy less, means you reduce your electricity bills. In addition, you earn by selling the excess solar energy you sell to the grid.

How do you sell back solar power?

Read on to learn about the different ways to sell back power. This is the most common way consumers believe they can sell electricity to the grid. However, the way that you can earn income from excess solar power is through net metering. Currently, there are over 35 states that offer a net metering program for solar system owners.

Can you sell solar power without battery storage?

Without battery storage, this excess electricity flows back into the utility grid for other customers to use. This two-way relationship between your property and the electrical grid makes selling solar power possible. Here's how it works: The most common method for selling solar energy back to the grid is through net metering.

How do I Sell my excess solar energy?

There are several ways you can sell your excess solar energy. One option is through a buyback program with your local utility company. Alternatively, you

can sell your excess power to a power company, who then sells it on to other customers.

How can you make money with solar energy?

Moreover, with the right infrastructure and agreements in place, you can even earn money by selling the excess energy back to the grid. solar energy production is a clean, green process that has significant environmental benefits. Unlike fossil fuels, the generation of solar power doesn't release harmful carbon dioxide or other pollutants.
