Overview

in is mostly based on and . Some energy infrastructure was damaged by the . There is high reliance on for energy in Syria, and electricity demand is projected to increase by 2030, especially for industry activity such as . However, conflict in Syria has caused electricity generation to decrease by nearly 40% in recent years due to plant destruction and fuel shortages. Electricity access in daily life for Syrians has also been.

What type of energy is primarily used in Syria?

In Syria, most energy is based on oil and gas. Some energy infrastructure was damaged by the Syrian civil war. In the 2000s, Syria's electric power system struggled to meet the growing demands presented by an increasingly energy-hungry society.

Can Syria match all-purpose energy demand with wind-water-solar (WWS)?

This infographic summarizes results from simulations that demonstrate the ability of Syria to match all-purpose energy demand with wind-water-solar (WWS) electricity and heat supply, storage, and demand response continuously every 30 seconds for three years (2050-2052).

Why is energy demand increasing in Syria?

Energy demand in Syria has been increasing at a rate of roughly 7.5% per year due to the expansion of the industrial and service sectors, the spread of energy-intensive home appliances, and state policies that encouraged wasteful energy practices, such as high subsidies and low tariffs.
