# Israel microgrid policy

## Overview

---

Should Israeli microgrids be based on centralized markets?

Since the current proposed reforms of Israel's electricity sector include fully centralized markets, the assumption of identical revenues for identical services is reasonable for the timeframe in which microgrids would move beyond an initial "pilot project" stage.

Are microgrids a sustainable alternative to Central-Station generation in Israel?

Sustainability multi-criteria evaluation for microgrid deployment is proposed. Environmental, economic and social costs and benefits are evaluated for microgrids. Microgrids are cost-effective alternative to central-station generation in Israel. Net benefits to the Israeli economy may exceed \$13 million per year.

How much does a 10-MW microgrid investment benefit the Israeli economy?

This analysis indicates that, considering the reliability, T&D investment deferral, local economic, environmental, and social costs and benefits of each alternative, the net benefits to the Israeli economy from selecting the incremental 10-MW investment in a representative Israeli microgrid exceed \$13 million per year.

Are microgrids better than conventional central-station generation?

The results of that study indicate that, while microgrids may be superior to conventional central-station generation on a stand-alone cost-benefit analysis, both resource types require compensation through some combination of capacity, energy and ancillary service payments.

How can a microgrid mitigate the risks of intermittent renewables?

For example, microgrids can often use storage and demand-side resources to mitigate the risks of frequency and voltage fluctuations associated with

intermittent renewables, at levels of locational granularity that is not easily accommodated by centralized generation and transmission and distribution (T&D).

Should microgrids integrate renewable and smart-grid technologies?

While most of the literature focuses on renewable and smart-grid technologies at the utility level, there is growing interest in estimating the benefits of microgrids integrating both technologies at smaller scales.

### ORAD launches in Israel hybrid microgrid systems for energy

The microgrid infrastructures serve in the Western world mainly during emergencies. In California there are such systems built on trucks designed for operation in crises when there is complete breakdown of the national electricity grid. In Israel minigrid systems are expected to be constructed in some IDF bases in the next few years.

### Microgrid: Architecture, policy and future trends

Future electricity network must be flexible, accessible, reliable and economically viable to realise the aims of the smart grid initiative. In order to achieve these objectives and to reduce greenhouse gas (GHG) emissions, research on various configurations or architectures of microgrid ( $\mu$ Grid) systems is gaining greater attention.

### ORAD launches in Israel hybrid microgrid systems for energy

ORAD, through its subsidiary, Solarpower, has started building hybrid microgrid systems for the African and Israeli markets. The systems are based on a combination of solar ...

## **PARTNERS**

Distributed energy and microgrids disrupt the energy market, well beyond the introduction of new technologies. The fragmented and technologically-diversified nature of this new market requires a coordinated operation between an array of players, a network of eco-system partners that can jointly work to deliver a coherent and effective operation.
