Geology of South Georgia and the South Sandwich Islands

The island of South Georgia is unusual among oceanic islands for having pre-Cretaceous sedimentary rocks underlying much of the island and a significant portion of felsic igneous rocks. Two-thirds of the island consists of intensely folded flysch, capped with Aptian age fossils, tuff and greywacke in the Cumberland Bay Series.

South Georgia and the South Sandwich Islands

1 South Georgia Island is the only inhabited island, with the summer-only settlement of Grytviken, and the only one regularly visited by cruise ships. Minor islands are ranged along its north coast - those visited by cruises are Willis, Bird, Albatross and Prion, and Cooper. The south coast is exposed to raging winds and waves and is seldom visited - Annenkov is the only large island ...
