An engineering assessment of CO₂ storage in oilfields will also involve a quantitative analysis of large-scale flow accounting for reservoir structure, variations in permeability and well placement.

LARGE-SCALE ELECTRICITY STORAGE

Meeting very short-term needs takes very little energy and can be neglected in studying longer-term storage needs, but the cost of meeting the very short-term needs using batteries is included in the cost estimates given below.

2025 energy storage field scale analysis table

It has exceeded the target of installing 30GW (equivalent to 60GWh based on the 2C discharge rate, as shown in Table 1) or more of new energy storage by 2025, as proposed in the documents (Guidance on accelerating the development of new energy storage) by the NDRC and the NEA.
