How to set up Azure Blob storage flow in power automate?

In Power Automate, I started with the Template provided by Microsoft and set up the flow: The flow requires two connectors to be set up: While editing Azure Blob Storage we see that we need the name of the azure storage, in my case "svflorida" and storage access key: Storage access key is located in in azure portal under Access Keys:.

How to create a power automate workflow in MongoDB?

1: User enters the details and submits the Onboarding Form . 2: Entered information is inserted into MongoDB collection and Proof document uploaded in the form is stored in Azure Blob Storage and this will trigger a Power Automate Workflow. 4: Scanned document is validated with the details present in the MongoDB collection.

What is a blob container in Azure platform?

In Azure Platform I created a storage account and in it I created a Blob Container. "A container organizes a set of blobs, similar to a directory in a file system. A storage account can include an unlimited number of containers, and a container can store an unlimited number of blobs."

How do I access Azure Blob Storage?

Use Azure Active Directory to access your Azure Blob storage. Use Azure Active Directory to access your Azure Blob storage. Use Azure Active Directory to access your Azure Blob storage in Azure Government. Use Microsoft Entra ID to access your Azure Blob storage. Use your own Microsoft Entra ID app for service principal authentication.

How do I trigger a flow if a blob is added or modified?

This operation triggers a flow when one or more blobs are added or modified in a container. This trigger will only fetch the file metadata. To get the file

content, you can use the "Get file content" operation. The trigger does not fire if a file is added/updated in a subfolder.

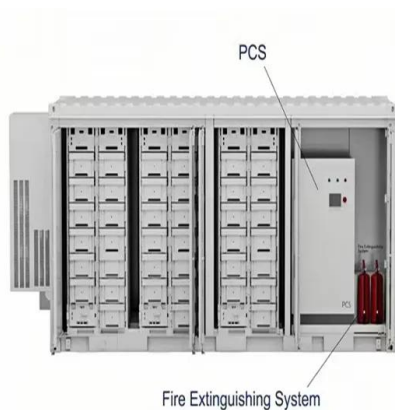

Is there a way to connect to power platform blobs?

There is only one reliable workaround as of now - don't use firewalls in your storage accounts if you want to connect to them from Power Platform. The connector does not support blob names and paths that contain URL decodable characters, i.e. "+" or "%" followed by two hexadecimal digits. The connector does not support gateways.

## Using PowerShell to Manage Azure Blob Storage , by Tom

Here are some hands-on projects designed to give you real-world experience with PowerShell and Azure Blob Storage. Project 1: Create an Azure Blob Storage Container. Objective: Learn how to create
