What type of energy does New Zealand use?

The electricity sector in New Zealand uses mainly renewable energy, such as hydropower, geothermal power and increasingly wind energy. As of 2021, the country generated 81.2% of its electricity from renewable sources.

Why does New Zealand need more electricity generation?

In New Zealand, more electricity generation is needed to meet future electricity demand and replace retiring thermal power plants. The initial build costs of new generation often total millions of dollars, so investors need assurance they can recover the cost of their investments.

How does New Zealand's electricity sector work?

New Zealand's electricity sector is split into six distinct parts: Generation – Generation companies generate electricity at power stations, injecting into either transmission lines (grid-connected generation) or distribution lines (embedded generation). The electricity generated is sold via the wholesale market to retailers.

How does New Zealand generate electricity?

Electricity generation from the combustion of coal, oil, and gas provides baseload, backup and peaker electricity supply. Generation from these fuels is around a quarter of New Zealand's electricity generation. Most of New Zealand's thermal plants are found in the North Island, close to domestic coal, oil, and gas resources.

Where can I find information about electricity in New Zealand?

Data tables for electricity [XLSX, 312 KB] From this page you can also access all historical electricity information published by our Modelling and Sector Trends Team. Information is available on New Zealand's electricity supply, demand, and transmission and distribution. Electricity prices are presented on the Energy prices pages. Energy prices.

What is the LCOE for Best New electricity supply in New Zealand?

The Generation Investment Survey also found the LCOE for best new electricity supply 2 in New Zealand to be roughly \$90/MWh (in 2023 NZ dollars 3). This is an increase from \$86/MWh (in 2023 NZ dollars) the year before. This increase reflects a higher cost of loans and tight global supply chains.
