

## European Solar Energy Storage

# Niche energy Zambia

## Overview

---

### Does Zambia need more energy?

While developed nations look to decarbonize, countries in sub-Saharan Africa, including Zambia, will need significantly more energy to power a high-growth society and achieve development goals. The vast majority of Zambia's population is comprised of smallholder farmers, producing 80 percent of the country's agricultural production.

### What is Zambia's current energy landscape?

Zambia's current energy landscape is dominated by hydropower. Large-scale dams, like the Kariba Dam and the Kafue Gorge Dam, have historically been the workhorses of the nation's electricity grid. While this reliance on hydropower has provided a seemingly stable source of energy, it presents a vulnerability in the face of a changing climate.

### Is Zambia a good place for solar power?

Beyond the limitations of its current energy landscape lies a wealth of opportunity. Zambia is blessed with an abundance of natural resources that can be harnessed to create a more sustainable and secure energy future. Sunshine bathes the land for an average of 2,000 to 3,000 hours annually, presenting a perfect scenario for solar power generation.

### Can Zambia attract investor interest in energy development?

As debt-burdened African nations expand engagement with higher-income countries beyond aid, Zambia serves as an important case study on opportunities to attract investor interest in energy development.

### How can Zambia improve energy security?

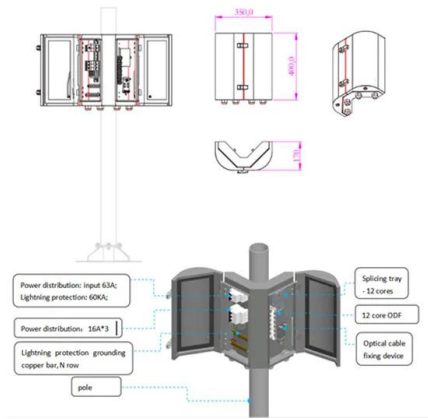

Enhanced Energy Security: By diversifying its energy mix and reducing dependence on a single source like hydropower, Zambia can mitigate the risks associated with climate variability. Droughts and fluctuating water levels will

have a less significant impact on overall electricity generation.

Does Zambia have a good electricity mix?

There are notable low-hanging fruits in the development of Zambia's electricity mix. While Zambia has the potential to generate 2,300 MW of solar and 3,000 MW of wind, only 76 MW of solar has been installed and no wind power to date.

## Niche energy Zambia

### Diversifying Energy Supply for Zambia's Energy Security

Expediting the unbundling of power generation from transmission and distribution will deregulate Zambia's energy sector, introduce cost-reflective tariffs, and unlock public funds for other

### Zambia's green growth opportunities: Balancing economic ...

Zambia has vast natural resource endowments, and the environment--development tradeoffs can be balanced with sustained economic growth. First, Zambia can leverage energy transition minerals and other natural resources for its development alongside strengthening its environmental legislation, institutions, and enforcement.
