Overview

How much does an off-grid solar system cost?

This guide covers: How does off-grid work?

Off-grid solar system prices vary depending on how much power you use, your location and the amount of backup power that you have. The cost of an off-grid system for a typical Australian home (18kWh / day) ranges between \$25,000 – \$45,000.

What is an off-grid solar system?

An off-grid solar system is a solar power system designed to generate enough power throughout the year and have enough battery capacity to meet the home's requirements. This approach to electrification is commonly used in remote areas with little access to electricity.

Does an off-grid solar system need battery storage?

An off-grid solar system, which is not connected to the electricity grid, requires battery storage. It must be designed appropriately to generate enough power throughout the year and have enough battery capacity to meet the home's requirements.

What is off-grid electrification?

Off-grid electrification is an approach to access electricity in remote areas with little access to it. The term off-the-grid (OTG) can refer to living in a self-sufficient manner without relying on public utilities. People who adopt this lifestyle are called off-gridders.
