Does a microgrid control system cost more?

The control system for the smaller microgrid will likely cost less in real dollars but consume more of the overall project budget than the control system for the larger one. “Your control system may be a little less [costly] in smaller ones, but it’s going to be a much larger portion of the cost than in the larger one.

What is a modular microgrid?

In the ongoing effort to lower the cost of microgrid deployment, one concept that continues to evolve is that of the modular microgrid, best expressed in a system that can fit inside a single shipping container. It’s not a new idea.

How much does it cost to install a microgrid?

This is definitely a sweet spot for smaller village projects, and there’s a definite need for systems that size.” For an average 16 kW of solar / middle-range off-grid microgrid, Nesbit says the cost for a completely installed system, including permitting, is going to run approximately \$80,000 to \$90,000. That also includes a bit of training.

Who develops container microgrids?

Another developer of container microgrids is Arizona State University (ASU) Associate Professor Dr. Nathan Johnson, who heads ASU’s Laboratory for Energy And Power Solutions. Before beginning his faculty position at ASU, Johnson was an NSF Postdoctoral Fellow at HOMER Energy.

Which factors influence the cost of microgrids?

Several factors, including generation choice, battery size, and interconnection upgrades, influence the cost of microgrids. However, there are ways to manage these factors to ensure microgrid projects can move forward with satisfied customers, as discussed in the Microgrid 2021 conference session

called “Why Does a Microgrid Cost What It Costs?

”.

Is a microgrid more expensive than a small solar array?

True, larger microgrids will likely be more expensive than smaller microgrids — but in gross terms, not necessarily on a per kilowatt basis. In fact, generation for a very small microgrid tends to cost more per kilowatt than a comparable larger version. For example, a 50-kW solar array is more expensive per kilowatt than 1-MW solar array.
