How do I use power automate desktop flow - upload to Azure Blob Storage?

Power Automate Desktop Flow - Upload to Azure Blob Storage using AzCopy  
First, I create the following variables within the flow. To generate the URI with the SAS (Shared access signature) token, go to the Azure Portal to your Azure storage account. Go to containers and create a new container.

How to trigger Azure Blob Storage?

You can use any other trigger as per your requirement. Then write a JSON object which will contain 3 variables for path, file name and file content. Here path is the "container" of the Azure Blob Storage. In flow you will find lot of azure blob storage action.

Is there a way to connect to power platform blobs?

There is only one reliable workaround as of now - don't use firewalls in your storage accounts if you want to connect to them from Power Platform. The connector does not support blob names and paths that contain URL decodable characters, i.e. "+" or "%" followed by two hexadecimal digits. The connector does not support gateways.

Does Azure Blob Storage support gateways?

The connector does not support gateways. Although creating an Azure Blob Storage in the Connection and Dataflow tab, an incorrect option "Choose a gateway" is displayed. When using "CreateFileV2" operation with "Access Key" authentication from Power Apps the dataset parameter should be "AccountNameFromSettings" instead of the blob endpoint.

What products and regions can I use the Azure Blob Storage Connector?

This connector is available in the following products and regions: The Azure Blob Storage connector now supports connecting to Azure Data Lake Storage Gen2 (ADLS Gen2) accounts, using multi-protocol access. You can read more

about this new feature, including the availability and known limitations in this blog.

How do I use Azure Storage blob authentication?

For "Access Key" authentications, enter the full Azure Storage blob endpoint on Azure Storage account name or blob endpoint parameter. When using "V2" operations with "Access Key" authentication, the blob endpoint must be provided in the dataset parameter as well. For "V2" operations, enter the full Azure Storage blob endpoint on dataset parameter.
