I want to build a 20kw solar system by my self. Long story

You'll need a charge controller, inverter, and battery management system (most are integrated into one unit these days) rated for your grid. IE in the US, we have 120vAC and 240vAC 50/60Hz, so to run every device you'd need two seperate grids or a way to split the 240 down for the smaller circuits.
