

## European Solar Energy Storage

# South Sudan solium energy

## Overview

---

Can solar energy be used in South Sudan?

The country has plenty of renewable energy resources which can possibly be exploited to generate electricity. In spite of the abundance in resources, renewable energy resources are not popular or commonly used in South Sudan. Solar energy has shown success in the domain of electric power generation.

Why is South Sudan facing a serious energy crisis?

South Sudan faces a serious energy crisis due to a number of factors, including devastating conflicts (e.g. 1955-1972, 1983-2005 & 2013-present) and reliance on the fossil fuel source. The country has the lowest energy consumption rate in Africa and the highest cost of producing energy (World Bank, 2016).

Is oil the right form of energy for South Sudan?

However, oil is not the right form of energy to meet South Sudan's rising energy demand due to (1) high costs (e.g. high costs of fuel and generator repair), (2) sporadic diesel fuel supply, (3) inefficiency and unsustainability and (4) detrimental health impacts on people and environment.

Why should South Sudan invest in solar energy?

This means that South Sudan should have regulatory framework and good investment policies that can attract reputable companies that will bring technology and pool of expertise to develop the solar energy sector and associated power industries in the country.

Does South Sudan have a shortage of electricity?

Abstract: South Sudan is experiencing serious shortage in electricity supply with only 1% of the population having access to grid electricity. The country has plenty of renewable energy resources which can possibly be exploited to

generate electricity.

Is biomass a source of electricity in South Sudan?

Traditional biomass – the burning of charcoal, crop waste, and other organic matter – is not included. This can be an important source in lower-income settings. South Sudan: How much of the country's electricity comes from nuclear power?

Nuclear power – alongside renewables – is a low-carbon source of electricity.
