## Energy in Spain

Spain has seven operating nuclear reactors and in 2022 they generated 20.25% of the country's electricity. [17] The government's energy and climate plan specifies that installed nuclear capacity will remain at current levels of about 7,100 MW until at least 2025, and will then reduce to just over 3,000 MW from 2030 onwards.

## Policy pathways for Spain's energy transition

Source: the authors. Grass-roots-centred pathway: Unidas Podemos 20. Spain almost achieved a full decarbonisation of the entire economy by 2050. In the electricity sector, this was achieved through strict phase-out policies for fossil-fuel power and emphasising the role of citizens and communities in building up a new and renewable power system.

## Supporting the future of cogeneration in Spain

Together, they are working to expand the role that cogeneration can play in the future of Spain's power system. Cogeneration is an efficient and cost-effective technology that simultaneously generates electricity and heat. The process is up to 40% more efficient than generating them separately. Cogeneration also supports the use of renewable
