

European Solar Energy Storage

Tajikistan infinity power business

Overview

Is Tajikistan moving its energy sector towards more reliability?

With an aging electricity supply that relies almost entirely on one source of power generation, hydropower, Tajikistan has a uniquely unstable power supply that has caused energy shortages and rolling blackouts for decades. Now, Tajikistan appears to be moving its energy sector towards greater reliability and sustainability.

Why does Tajikistan need interconnecting power systems?

In the case of Tajikistan, it provides a bigger market to which it can sell its hydropower surpluses. In energy security terms, interconnecting power systems offers a more diverse energy supply and reduces the impact of disruptions.

How can Tajikistan strengthen and expand electricity trade?

Based on these considerations, for Tajikistan to strengthen and expand electricity trade, the IEA recommends a roadmap focused on three key points: Ensure favourable conditions to enable multilateral electricity trade. Adopt multilateral market models to expand electricity trade.

Can Tajikistan export electricity?

Several options for Tajikistan's cross-border electricity trading are explored in this report. The analysis indicates that resource availability and variations in seasonal electricity demand profiles in relation to its neighbours provide opportunities for Tajikistan to export electricity.

What is electricity trading in Tajikistan?

Most electricity trading arrangements in Tajikistan today are long-term bilateral contracts with limited options for variations in volumes or price.

Should Tajik use hydropower for economic gain?

For Tajikistan, given its economy and the financial and physical condition of its power sector, regional electricity market opportunities would be attractive. Multilateral trade would allow the use of Tajik's excess seasonal hydropower for economic gain in the near term.
