Overview

República Democrática de Timor-Leste República Democrática de Timor-Leste Timor Lorosa'e Timor-Leste 1999 8.

Why does Timor-Leste have a cybersecurity problem?

Increased regional economic integration and geopolitical competition further incentivise state and non-state actors to exploit digital infrastructure to gain political and economic advantages. These risks are enhanced by the fact that Timor-Leste's state security agencies currently lack robust cybersecurity capabilities.

Why should Timor-Leste invest in digital infrastructure?

The imminent upgrading of Timor-Leste's digital infrastructure promises to create significant opportunities in sectors such as finance, telecommunications, and e-commerce, as well as improved public services and administrative processes.

Does Australia support Timor-Leste's digital infrastructure?

Australia has played a significant role in supporting Timor-Leste's digital infrastructure, most notably the South Submarine Cable fiber optic project. This support is ostensibly aimed at promoting economic development and digital security in the country and the region more broadly.

Where are low-cost weather stations being installed in Timor-Leste?

Meanwhile, in the capital, Dili, a test low-cost weather station has been installed at Timor-Leste's National Directorate for Meteorology and Geophysics with the support of the International Centre for Theoretical Physics. More low-cost stations are planned to be installed in remote locations across the country.

Why do we need early warning systems in Timor-Leste?

The project is much needed as climate change is expected to bring more

floods, heatwaves, droughts and storms to Timor-Leste, while raising sea levels. “The simple fact is that early warning systems save lives and help protect ecosystems,” said Jian Liu, the Director of UNEP’s Early Warning and Assessment Division.

Is Timor-Leste a developing country?

Timor-Leste is one of the world’s least developed countries and a small island developing state. Less than half of least developed countries and only one-third of small island developing states have multi-hazard early warning systems, which can detect a range of potential disasters, from floods to chemical leaks.
