As of May 21, 2025, the energy sector has witnessed notable developments, particularly in the realms of investment and innovation. Companies are increasingly looking toward renewable energy sources such as solar and wind, aligning with global carbon neutrality goals.

Energy Transition--Opportunities for Power and Utility ...

Tax and economic policy incentives will fuel the energy transition and will be attractive to power and utility companies as they look to horizontally and vertically integrate and expand.

Q& A: Energy transition: the role of traditional energy

Davies: Traditional energy companies have a critical role in the energy transition. They have the technical and operational capacity, as well as the capital, needed to drive the energy transition.

Home , Energy Transfer

Energy Transfer is one of North America's largest and most diversified midstream energy companies. See how we're working to safely transport the oil and gas products that make our lives possible.

How Does Decentralization Impact Traditional Energy Companies?

These sources can range from residential solar panels and wind turbines to small-scale combined heat and power (CHP) plants. This shift towards decentralization is driven by technological advancements, increasing environmental awareness, and a desire for

greater energy independence and resilience.

Energy Transactions , Energy and Energy Transition , Capabilities

Our extensive experience allows us to guide energy companies on commercial matters affecting all aspects of their business, from day-to-day operational issues to portfolio-transforming transactions.

Traditional company, new businesses: The pairing that can ...

The list of long-established companies that have been disrupted by fast-moving, tech-enabled powerhouses gets longer by the day. Facing pressure from younger, more innovative challengers, many incumbent companies in the energy sector are also reinventing themselves through a dual effort to digitize their legacy businesses and create new

Energy Transition--Opportunities for Power and Utility Companies

Tax and economic policy incentives will fuel the energy transition and will be attractive to power and utility companies as they look to horizontally and vertically integrate and expand.

How will your organisation transition from traditional

energy ...

In this series, Economist Impact asks and tries to answer some of the most fundamental questions on sustainability as they relate to business, society and governance.

Who Owns Power in the Energy Transition?

We argue that it cannot. We propose that democratic, public ownership of the electricity grid can best deliver on energy affordability and a green transition. However renewable energy emerged during the turn toward privatization, meaning that deployment has largely been managed via private companies.
