U S Outlying Islands east solar

Overview

The United States Minor Outlying Islands is a statistical designation defined by the International Organization for Standardization's ISO 3166-1 code. The entry code is ISO 3166-2:UM. The minor outlying islands and groups of islands comprise eight United States insular areas in the Pacific Ocean (Baker Island, Howland Island, Jarvis Island, Johnston Atoll, Kingman Reef, Mid. The United States Minor Outlying Islands is a statistical designation defined by the International Organization for Standardization's ISO 3166-1 code. The entry code is ISO 3166-2:UM. The minor outlying islands and groups of islands comprise eight United States insular areas in the Pacific Ocean (Baker Island, Howland Island, Jarvis Island, Johnston Atoll, Kingman Reef, Midway Atoll, Palmyra Atoll, and Wake Island) and one in the Caribbean Sea (Navassa Island). Though scattered across the Pacific and relatively small, the islands are rich in history and nature and have been strategically important. The nearly barren Howland is famous for being the island renowned American pilot Amelia Earhart intended to land on before she vanished during her round-the-world flight in 1937. Wake, home to a now extinct flightless bird, was the site of a pitched World War II battle in 1941, and was an essential stopover for aircraft transiting the Pacific in the mid-20th century. Likewise, Midway Atoll is home to many corals and birds and was also the center of a famous battle of WW2, which helped turn the tide of the Pacific War. Other islands are rich in unique biodiversity, such as Palmyra, the site of a WW2 base. Johnston Atoll was a famous island for its Cold War base, when it was expanded and used to destroy chemical weapon stockpiles; it was also the site of a nuclear accident. Johnston was heavily modified with land expansion, while others are nearly untouched nature reserves.

In 1936, a began to settle Americans on Baker, Howland, and Jarvis. Still, all three islands were evacuated in 1942 due to . ISO introduced the term "United States Minor Outlying Islands" in 1986. From 1974 until 1986, five of the islands (Baker Island, Howland Island, Jarvis Island, Palmyra Atoll, and King. In 1936, a began to settle Americans on Baker, Howland, and Jarvis. Still, all three islands were evacuated in 1942 due to . ISO introduced the term "United States Minor Outlying Islands" in 1986. From 1974 until 1986, five of the islands (Baker Island, Howland Island, Jarvis Island, Palmyra Atoll, and Kingman Reef) were grouped under the term , with code PU. The code of Midway Atoll was MI, the code of Johnston Atoll was JT, and the code of Wake Island was WK. Before 1986, Navassa Island, along with several small islands in the that are no longer under U.S. sovereignty, were grouped under the term , with BQ. The populated , called Sikaiana and now effectively controlled by

the , are not included in official lists of U.S. Minor Outlying Islands. In 1856, the Privy Council and voted to accept their voluntary cession. The Kingdom later became the , all of which was annexed by the in 1898. In 1959, the resulting federal U.S. , excluding only and , became a U.S. state. Residents of the Stewart Islands, who are like the rather than , claimed to be citizens of the United States since the Stewart Islands were given to King Kamehameha IV in 1856 and were part of Hawaii at the time of the United States annexation in 1898. The U.S. federal and Hawaii state governments inform.

Except for , all of these islands are . Currently, none of the islands have any known permanent residents. However, military personnel, U.S. Fish and Wildlife Service personnel, and temporarily stationed scientific and research staff are posted to some islands. The counte. Except for , all of these islands are . Currently, none of the islands have any known permanent residents. However, military personnel, U.S. Fish and Wildlife Service personnel, and temporarily stationed scientific and research staff are posted to some islands. The counted 315 people on and 1 person on . The Territory of Palmyra Atoll is an , separated in 1959 from the rest of the former incorporated when Hawaii became a . There has been no recorded modern population, except at the . During the late 2010s, the U.S. military began reinvesting in the airfield and other assets on . The islands are grouped for statistical convenience. They are neither administered collectively nor share a single cultural or political history beyond being uninhabited islands under the sovereignty of the United States. They are all outside the of the United States and have no customs duties. Except for , the Pacific islands are surrounded by large and are within the bounds of the .

AirportsAirports in the United States Minor Outlying Islands provide critical emergency landing points across the vast Pacific Ocean for all aircraft types, allow for important military presence in key strategic zones, and have limited scheduled commercial services. The following is a list. AirportsAirports in the United States Minor Outlying Islands provide critical emergency landing points across the vast Pacific Ocean for all aircraft types, allow for important military presence in key strategic zones, and have limited scheduled commercial services. The following is a list of island airports with () codes: • PLPA: , Cooper Island, • PMDY (MDY): , Sand Island, • PWAK (AWK): , Other airports include: • , (Formerly PJON/JON): The airport was built during WWII and saw significant commercial traffic during the second half of the 20th century. However, it was abandoned in 2003. • Kamakaiwi Field: (from 1937 to about 1945) • : The lagoon was used as a halfway station between Hawaii and American Samoa by for in 1937 and 1938.

Temporal variability of electricity demand, and wind and solar resource supply over Oahu during the 14-year period from 2006 through 2019 (1a) and over the contiguous U.S. (CONUS) during the 10-year period from 2006 through 2015 (1b).

Today, the U.S. Department of Energy (DOE) welcomed 25 new coastal, remote, and island communities to the Energy Transitions Initiative Partnership Project (ETIPP) as the technical assistance program's fourth cohort.

The islands will work with ETIPP partners to conduct modeling and analysis to understand the full potential of decentralized solar when combined with utility-scale solutions. These tribes, islands, and remote towns mark the third cohort of communities joining ETIPP, which launched in 2021 with 11 communities.

Many islands have access to abundant wind, solar, hydro, tidal, biofuel, or geothermal energy resources and could significantly cut ties with the fossil fuel industry. This transition away from imported, carbon-dense fuel could improve local economic and ecological resilience, reduce electricity prices, and dramatically reduce per capita carbon .
