## Overview

---

Another business at the park, Kona Salt Farm, harvests salt from the deep cold ocean offshore. The unforgiving Kona sun helps to evaporate that water where only pure salt remains.

Another business at the park, Kona Salt Farm, harvests salt from the deep cold ocean offshore. The unforgiving Kona sun helps to evaporate that water where only pure salt remains.

Makai Ocean Engineering's ocean thermal energy conversion (OTEC) power plant in the US is the world's biggest operational facility of its kind with an annual power generation capacity of 100kW, which is sufficient to power 120 homes in Hawaii.

The State of Hawaii has invested over \$130 million since 1974 to create the Hawaii Ocean Science and Technology Park (HOST Park) in Kailua-Kona on the island of Hawaii. The innovative green economic development park is administered by NELHA, a self-sufficient State of Hawaii agency.

Makai Ocean Engineering is preparing to commence operations on grid-connected ocean thermal energy plant the BigIsland in Hawaii, US. Said to be the the largest such plant in operation, the facility is designed to generate clean power using changes in ocean water temperature.

Energy in the U.S. state of Hawaii is produced from a mixture of fossil fuel and renewable resources. Producing energy is complicated by the state's isolated location and lack of fossil fuel resources.
