

European Solar Energy Storage

United Kingdom power battery for home

Overview

Which batteries are suitable for energy storage?

For example, our domestic range offers everything from compact batteries with a 2.6kWh capacity (perfect for small properties), right up to powerful batteries with an enormous 13.5kWh capacity (enough for even the highest-consumption households). Simply, as long as your home uses energy, it's suitable for energy storage solutions.

Should I charge my battery strategically?

As mentioned above, you can charge your battery strategically. GivEnergy home batteries will charge and discharge intelligently by default, taking advantage of cheaper energy rates. However, you can also take a more hands-on approach by setting schedules and timers around your energy usage and lifestyle.

Which Duracell battery should I Choose?

For a sleek, smart indoor battery you will want to select the Dura5. This battery can be wall mounted or stacked (see images on this page). For a robust, weatherproof outdoor battery solution, you need the Duracell 5+ which can wall mount anywhere.
