Are the terms 12 volt or 24 volt panels correct?

The panels themselves don't run at 12v either, there are 2 voltages on any given panel, the Voc and the Vmp. The Voc on a 12v panel is usually around 20-22v and that's what you'd see if you just stuck a meter in the wires on a sunny day. Vmp is where the voltage drops to once it

actually has to start putting out amps and doing real work.

24v solar panel for sale , Buy for home, boat and RV

Here, we will cover everything you need to know about 24V solar panels and help you choose the right solar panel for you. What are 24V solar panels? A solar panel 24V is a versatile module for 24 volt systems. A solar panel 24 volt can be used in RV or boat solar installations. It's a great choice for a residential solar system.

Beginners Guide to 12 Volt Solar Panels

If you had 12 volt solar panels and your amps are 14, you would need a charge controller that had at least 14 amps. However due to environmental factors, you need to factor in an additional 25%. This brings the minimum amps that this charger controller must have to 17.5 amps. In this example, you would need a 12 volt, 20 amp charge controller.
